IAAF Certified High-Performance Full PUR-System  
for Athletic Tracks

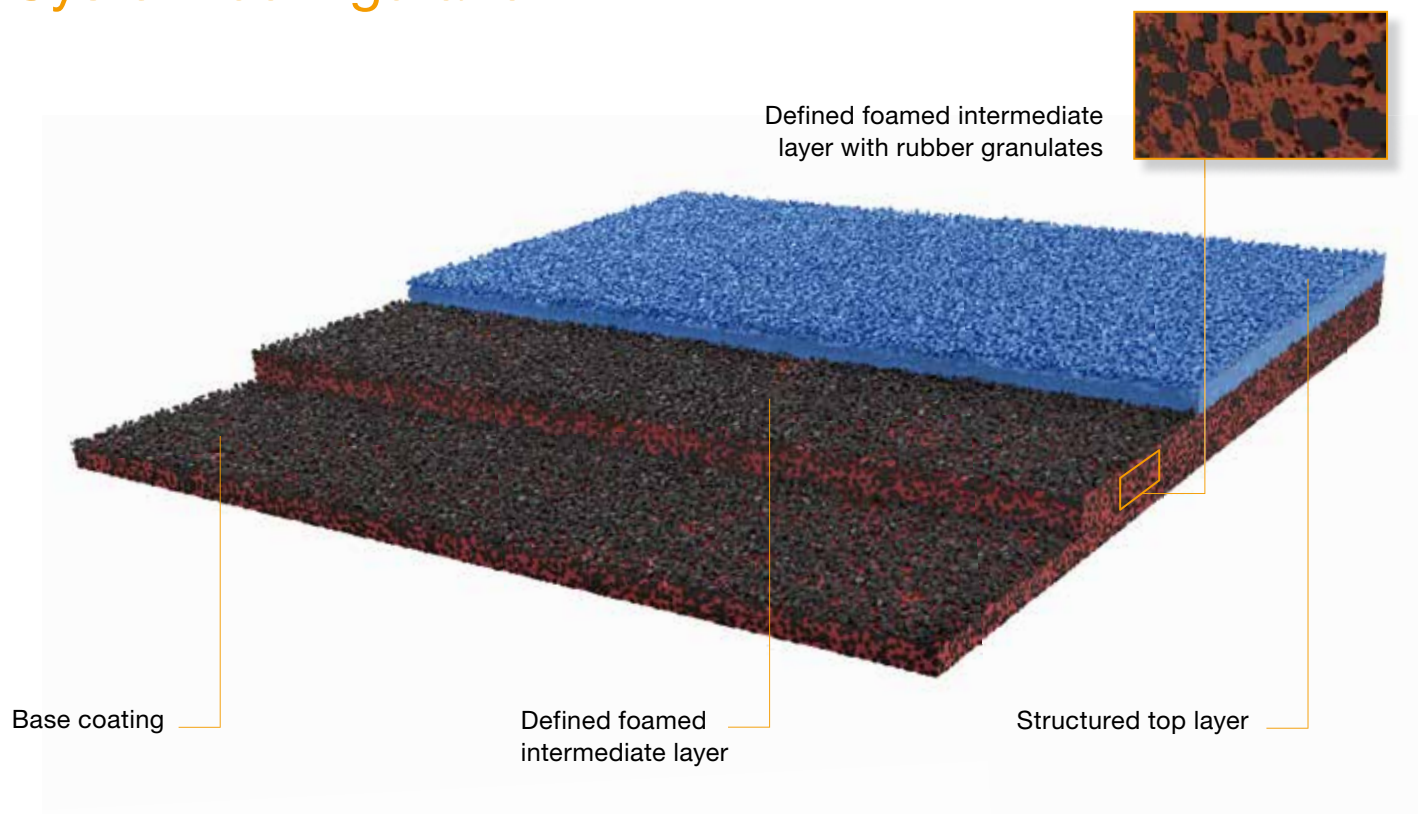

# CONIPUR MX+

## IAAF Certified High-Performance Full PUR-System for Athletic Tracks

The new CONIPUR MX+ full PUR system is based on the successful CONIPUR MX system and includes an innovative foamed intermediate layer for optimal performance. Recycled rubber granulates are used for the first two layers, providing a highly cost-effective solution. The top layer consists of high-quality EPDM granulates with solid homogeneous colors. This ensures an attractive

visual appearance and a long operating life. The system is characterized by excellent properties that benefit sprinters and long-distance runners, not least due to the “catapult effect.” This makes CONIPUR MX+ a foundation for top performance in all athletic disciplines. In addition, it is suitable for use in all climate zones.

## System configuration

## Advantages

### Excellent performance

MX+ gives energy back to the athletes and increases their performance. This is referred to as the “catapult effect,” and is a crucial factor particularly in sprinting. For long distance runners, it also ensures significantly less strain on the joints.

### Outstanding durability

The high-performance synthetic coating is characterized by low wear and tear. It is weatherproof, resists all external influences and UV radiation and is also spike resistant. This guarantees a long operating life.

### Optimal price-performance ratio

For CONIPUR MX+ in the first two layers no special granulates are required. Combined with user-friendly installation, this results in an optimal price-performance ratio.

## Field of application

CONIPUR MX+ is one of the highest quality running track systems CONICA offers. The optimal interplay of the three layers, applied in a casting procedure, guarantees high energy recovery and therefore the highest performance, while at the same time supporting athletes in their natural sequences of motion and reducing the risk of injury. On the basis of these characteristics, CONIPUR MX+ is predestined for use in top sports – meaning everywhere athletes achieve high performance.

## IAAF certified

CONIPUR MX+ has received a product certification from the IAAF, which is awarded only to the highest quality products. The full PUR-system meets the technical requirements for use in all international competitions. The system is also certified according to EN 14877 and DIN 18035.

## Innovative sports surfaces from CONICA

For 35 years CONICA sports surfaces, under the CONIPUR brand, has been developing, producing and distributing high-quality, reliable systems and products for creating synthetic sports surfaces in every climate zone in the world. In the process CONICA ensures expert support, excellent technical service and professional construction site supervision by experienced applications engineers. Every CONICA sports surface is highly resistant to various external influences and ensures consistently high performance. **The advantages at a glance:**

- Optimal performance
- Excellent resistance to UV radiation and weather
- Optimal skid resistance
- High durability
- Wide variety of color options
- Meets the highest aesthetic requirements
- Seamless application
- Reduced risk of injury
- Long operating life
- Can simply be “retopped” in case of renovations
