SPORTS FLOORING

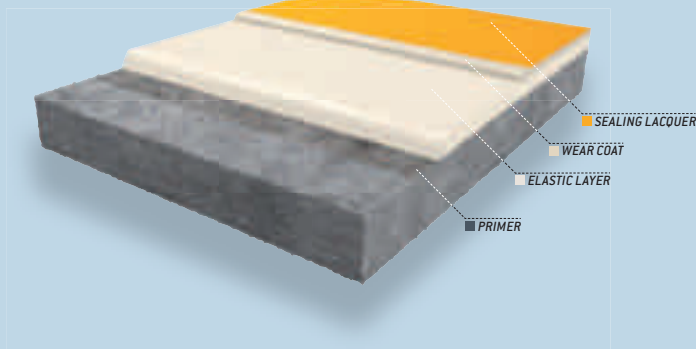

INDOOR FLOORINGS GO FULL PUR

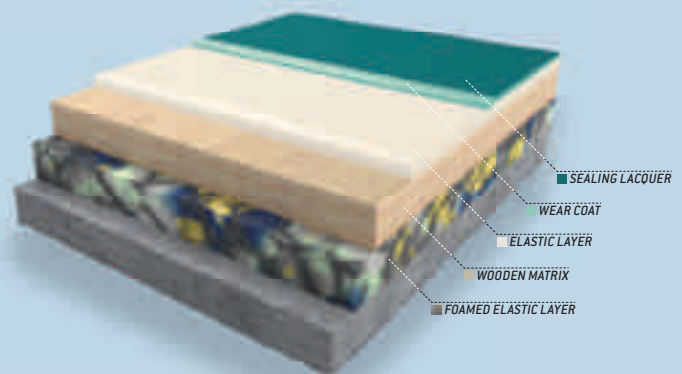

***100% PUR –
the Liquid
Elastic Layer***

Innovative sports floorings – with Liquid Elastic Layer

POINT-ELASTIC INDOOR FLOORING CONIPUR **HG FULL PUR**

COMBINED-ELASTIC INDOOR FLOORING CONIPUR **CE FULL PUR**

CONIPUR **HG pure FULL PUR**

Protective Function

The floor immediately offsets the impact forces like a shock absorber – this reduces the risk of injury. This effect is crucial, particularly for people with low body weight (children). The properties of the surface also reduces the stress on joints.

Force Reduction	25% (type 1)	Sliding Behaviour	95
Standard Deformation	0.5 mm	Abrasion	20 mg
Rolling Load	1500 N	Resistance to Impact	19
Ball Rebound	99%	Residual Impression	0.1 mm
Standards	EN 14904, DIN 18032, AgBB, EN 13501-1, suitable for Minergie Eco buildings		

CONIPUR **CE pure FULL PUR**

Protective Function

Combined-elastic sports floors incorporate most of the advantages of both point – and area-elastic floors. As a rule, they have a larger resonant mass. The point-elastic component above the wood construction has a protective, comfortable effect.

Force Reduction	58% (type 4)	Sliding Behaviour	95
Standard Deformation	3.9 mm	Abrasion	20 mg
Rolling Load	1500 N	Resistance to Impact	19
Ball Rebound	95%	Residual Impression	0.05 mm
Standards	EN 14904, DIN 18032, AgBB, EN 13501-1, suitable for Minergie Eco buildings		

point elasticity

combined elasticity

INDOOR FLOORINGS GO FULL PUR

CONICA has developed a high performance polyurethane coating which functions as an elastic layer and thus can replace the prefabricated elastic layers made of recyclates – 100% fresh produced material.

This adds to the high value of the system – with a high-level functionality. In the system variants, the coating also achieves the highest requirements of the emission specifications in a sustained manner as well as a classification regarding its fire behavior.

100% PUR – 100% SEAMLESS

An innovative variation for our point-elastic and combined-elastic sports flooring families.

FULL PUR – THE LIQUID ELASTIC LAYER

- 100% virgin, fresh produced material with clear origin
- 100% seamless system because of on-site liquid installation
- 100% PUR
- time saving due to quicker installation
- controlled quality
- Innovative, Swiss – typically CONICA

POLYURETHANE – THE HIGH-PERFORMANCE POLYMER

Polyurethane is the essential element for all sports flooring systems of CONICA.

Compared to other surface materials, this flexible polymer combines numerous advantages:

- almost all colour variations possible
- positive ecological balance sheet
- seamless surface
- easy to be re-topped in case of renovation
- low maintenance
- adjustable mechanical properties

CONICA AG, Schaffhausen, Switzerland

SWISS QUALITY – FOR FOUR DECADES

The global enterprise CONICA AG, headquartered in Schaffhausen/Switzerland, is an innovative leader in the indoor sports flooring industry. For 40 years now, CONICA sports floorings can be found wherever high performance is required.

CONICA systems for sports and multipurpose halls as well as for rehabilitation and fitness centres are state of the art. They meet all requirements in order to ensure the health and safety of sportsmen.

Besides their technical properties, there are virtually no limits to the possible colour schemes. The sports flooring of a hall is a key element in the overall appearance of a project. Thus planners, sportsmen and spectators appreciate CONICA sports floorings.
