APPLICATION SERVICE

CONICA

Supervisor

ON-SITE ENABLEMENT FOR DEMANDING PROJECTS.

Supervisor helps installation companies ensure consistent installation quality on demanding projects while developing their own team directly on site.

Givat-Ram-Stadium
Jerusalem, Israel

DELIVER DEMANDING PROJECTS RELIABLY AND STRENGTHEN YOUR TEAM.

ESPECIALLY RELEVANT WHEN...

- ...an available but inexperienced crew lacks training and experience.
- ...the project has high visibility, such as a national stadium or prestigious building.
- ...a new or growing crew needs to become fully operational on site without interrupting the project.
- ...technically demanding CONICA systems are being installed on site for the first time.
- ...the project has critical certification requirements, such as World Athletics Class 1 or 2.
- ...the installer wants to become more independent and capable in the long term.
- ...the installer is entering regions where the team has no previous CONICA experience.

WHAT IS THE SUPERVISOR SERVICE?

The Supervisor Service is a temporary, project-based on-site enablement and technical guidance service. An experienced CONICA expert guides inexperienced or new teams through instruction, supervision and targeted knowledge transfer.
The goals are project success, installation quality and compliance, including certification requirements, as well as lasting application expertise within the team. It is not a training course and does not provide additional installation capacity. Responsibility remains with the installation company. CONICA provides technical guidance and quality oversight.

THE BENEFITS FOR INSTALLATION COMPANIES

BENEFIT	VALUE FOR INSTALLERS
EXPERTISE WITHOUT ADDITIONAL FIXED COSTS	An available but inexperienced crew is developed into a capable team directly on site through qualified guidance, without the company having to build its own training structure.
TEAM ENABLEMENT	Guidance ranges from the correct mixing ratio to on-site project management. In the end, the entire crew knows how to complete a project independently and efficiently.
TECHNICAL GUIDANCE	An experienced CONICA expert provides technical guidance and oversees the installation without carrying out the work.
REDUCED REPUTATIONAL RISK	Early error prevention reduces uncertainty on high-visibility projects, resulting in less rework, fewer claims and fewer delays.
NEW MARKET ACCESS	Lack of experience is no longer a reason to decline a project. The crew develops with each project, and proven capability through CONICA support builds client confidence when contracts are awarded.
ENABLEMENT WITH A CLEAR END POINT	The Supervisor supports the crew only until it can complete demanding projects independently and reliably. As experience grows, the level of support decreases. The knowledge remains permanently within the team.

SUPPORT, NOT COMPETITION.

The Supervisor Service does not replace the installer's crew. It develops the team's capabilities. The customer relationship and project responsibility remain entirely with the local installer. The Supervisor helps ensure professional installation and builds expertise that remains within the team.

- The installer remains responsible and retains the customer relationship
- CONICA provides guidance, monitors quality and builds expertise
- The knowledge gained remains within the installer's company
